Data Engineer | SQL | ETL Pipelines | Azure | Python

Summary

Technical Data Scientist with data engineering experience building pipelines in Azure using Databricks, Synapse, Logic Apps, Python, SQL and Spark. Experienced in transforming real-time telemetry and operational data into structured datasets, developing automated data workflows, building monitoring tools, and supporting reporting teams. Skilled in documenting processes, troubleshooting data issues, and working with stakeholders to deliver actionable insights.

Skills

Data Processing
- PostgreSQL
- InfluxDB
- Databricks
- Hive
- PL/SQL

Programming & Framework
- Python
- SQL
- Scala
- R
- Spark
- Kafka
- Airflow

Data Engineering & Infrastructure
- Azure Synapse
- Azure Databricks
- Logic Apps
- Delta-style Lakehouse workflows
- SQL optimisation
- Data pipeline design
- Real-time telemetry analysis

Visualization & Reporting
- Power BI
- Grafana
- Miro

Soft Skills & Leadership
- Stakeholder communication
- Problem solving
- Agile & Scrum
- Cross-functional collaboration

Experience

Mindsett, Cloud FM | Data Scientist — Colchester, UK | 01.2022 – Present

- Built and optimised data pipelines using Azure Synapse, Databricks and Logic Apps, reducing processing time by 40% and increasing insights generation speed by 3x.
- Integrated previous Airflow experience into workflow and orchestration processes.
- Developed an asset health algorithm using PF, THD, Z-score and RMS harmonics, improving asset reliability by 30%.
- Created the Label Index system used to benchmark assets and support maintenance planning.
- Built an Asset Engineer tool using local Ollama models to generate likely symptoms, high-risk components and resolution paths based on asset name.
- Used explainability tools and bias checks during model prototyping.
- Designed Power BI and Grafana monitoring dashboards, reducing missing-data issues and cutting manual reporting workload by 60%.
- Implemented energy-usage reports that reduced client consumption by 12.5%.
- Analysed large-scale time-series datasets using PostgreSQL, InfluxDB and Kafka.
- Worked with Databricks Delta workflows for managing structured and unstructured telemetry data.
- Used GitHub and Azure DevOps for version control and deployment.

Reliance Jio Platforms | Data Analyst — Mumbai, India | 10.2020 – 09.2021

- Developed end-to-end data solutions using Scala, Spark and Hive, improving query efficiency by 35%.
- Implemented Kafka and Apache Flink for real-time data streaming.
- Automated ETL workflows using Airflow and Python, reducing processing time by 40%.
- Delivered data pipelines using PL/SQL and SAP HANA.
- Trained junior team members on SQL, Git, IntelliJ, Shell and Spark.

VEM Tooling | Full Stack Developer Intern — Pune, India | 02.2019 – 02.2022

- Developed & deployed a lightweight Android app (<1.5MB) on the Google Play Store, enhancing mobile accessibility for users.
- Built an ML-based model using TensorFlow & CNN for butterfly species classification with 70%+ accuracy.
- Designed an admin app for QR code-based rewards, increasing user engagement by 20%.

Education

University of Essex | Masters in Data Science — Colchester, UK | 10.2021 – 10.2022

- Specialised in NLP and Neural Networks.
- Conducted research in AI-driven appliance load monitoring, contributing to a published paper.

Vishwakarma Institute of Information Technology | Bachelor of Engineering in Information Technology — Pune, India | 2015-2021

- Focused on Machine Learning, Data Structures and Software Development.

Projects

Analysis of Police Data

Conducted a comprehensive analysis of Dallas police data, examining crime distribution and demographic impact, visualized through interactive maps and a portfolio website, earning a perfect score of 100/100.

AI-Assisted Health Query Dashboard

Built a prompt-engineered dashboard that uses structured inputs and simple ML logic to answer basic health-related queries, providing quick explanations based on user-entered symptoms and parameters.

Estate Asset Management Tool

Using prompt engineering, created an estate asset management tool, which on the prompt of asset name, generates list of critical components, failure points and possible fixes to give the user a quick go-to guide for the assets.

Mindsett Index

Developed the Mindsett Index, an algorithm combining multiple metrics to assess asset health, enabling data-driven predictive maintenance and operational efficiency improvements.

Webapps

Developed React-based management web apps for a local cricket club and a local garage.

Alerts for database downtime

Using Azure logic apps, created a notification app that alerts users on teams and via email about possible pipeline failures and threshold cut offs.

Certifications

Azure AI and Cloud Fundamentals
Microsoft | 28 Badges | 7 Trophies
SQL For Data Science
Coursera
Bits and Bytes of Computer Networking
Coursera
Google Cloud Platform Core Infrastructure
Coursera
How Google does machine learning
Coursera
Programming for everybody (Getting Started with Python)
Coursera
Networking in Google Cloud Platform
Coursera

Research

Researcher
CloudFM Group | Mindsett | University of Essex

- Voltage-Current Trajectory Feature Preprocessing Pipeline for Electronic Appliance Classification in Facilities Management.
- AI Driven Streamlining of Appliance Load Monitoring in Facilities Management.

Interests

Passionate about leveraging technology to create impactful community-driven projects, developing web apps, AI solutions, and data-driven platforms that empower local organizations and individuals. I actively build passion projects that enhance accessibility, efficiency, and insights for various communities, including a cricket club management platform and a Web3 gaming analytics tool.

Avid cricket enthusiast and chess player, participating in local matches and strategic gameplay. Cricket fuels my teamwork and leadership skills, while chess hones my analytical thinking and problem-solving abilities, both of which I integrate into my professional work in data science and AI.

I enjoy hosting and participating in office pool and table tennis tournaments where I have won 2 out of 3 trophies.
